

Smart Light LED

Step 1: Open ZigBee Network for Joining

Using your controller or hub's interface, enable the ZigBee network for joining.

Step 2: Turn On and Off 10 times

While the bulb is on, quickly turn the bulb off and then on 10 times in quick succession (using a light switch or power bar works best). If the reset is successful, the bulb will flash five times. If it does not flash five times, you will have to try again.

Step 3: Finish Joining at Hub (optional)

You may want to continue with additional steps such as naming or categorizing the device.

If device did not join:

Repeat the steps above. Make sure your Hub has a WiFi connection and the light bulb is in reach of the Zigbee network.
