

Smart Switch

Step 1: Open ZigBee Network for Joining

Using your controller or hub's interface, enable the ZigBee network for joining.

Step 2: Pull-to-Pair

Simply pull out the mylar tab from the battery compartment, and the Smart Switch will immediately power up and begin searching for a network to join.

Step 3: Finish Joining at Hub (optional)

You may want to continue with additional steps such as naming or categorizing the device.

If device did not join:

Remove switch from mount and remove battery. While holding down the switch's top button, reinsert the battery. When the status LED turns solid red, release the button. Repeat the steps above to rejoin the ZigBee network
